

## Review Shareit

### Shareware

Shareit is the best application to share files between users quickly and offline, allowing them to be done 200 times faster than by Bluetooth, regardless of the type of documents that are sent. Another of its features allows it to be used as a user-friendly built-in media player

**Shareware (Shareit** Information Technology Co., Ltd.) is a technology company founded in April 2015. The company's CEO is Michael Qiu.

Users can use SHAREit to transfer files, including photos, videos, music, contacts, applications, and any other files. The SHAREit app allows Windows, Windows Phone, Android and iOS devices to transfer files directly.

It is currently available in 39 languages, including English, Hindi, Indonesian, French, Spanish, Russian, Arabic, and Chinese.

SHAREit owners also have other utility applications such as LOCKit, LISTENit, CLEANit and CLONEit.

The SHAREit application uses a secure connection protocol and has faster transfer speeds than Bluetooth and NFC. The other method of file transfer is via Bluetooth, NFC, or USB drives. This was observed by several renowned universities and even by magazines like WIRED. Observing the insecure protocol offered by USB drives and the slow speed of Bluetooth, applications such as SHAREit have been developed, based on Wi-Fi Direct methods.

SHAREit also offers its users a variety of digital entertainment for videos, music, movies, GIFs, memes, etc.

Within its application, it collaborates with partners such as Times Music.SHARE, it has 1.5 billion users worldwide and it is also one of the 10 best applications downloaded on Google Play in the last 10 years, along with WhatsApp, Facebook, Instagram, Skype, UC Browser, Snapchat and Line, according to the data report. from the app app from the company Appannie Insights.

On May 8, 2018 SHAREit acquired the Fastfilmz app and named Karam Malhotra, the founder of Fastfilmz as CEO of SHAREit India. In 2017, the Indian government announced a list of apps, including SHAREit, on Android and iOS, which, according to intelligence agencies, they are spyware.

Troops were instructed to exclude these apps. Although, the app denies this charge by releasing an official statement. To ensure the safe sharing of offline apps on a peer-to-peer basis, SHAREit collaborated with Google to initiate the security metadata integration program.

After metadata integration, all applications shared via SHARE will be viewed offline by Google Play to ensure that all applications transferred from one device to another are original and free of malware.

For those of you struggling with the installation of this particular program, we can tell you: don't worry, we are here to help you and we will give you the most detailed (step-by-step) instruction tip on How to Download Shareit on PC.

So let's start from the beginning: open your third-party browser (we use Google Chrome) and search for Share it (in Google, for example), you can type it in your URL bar. It is better to trust the first result and click on it. We found a link to the Softonic website that provides some ways to download this application.

Then you can find the download button at the bottom right of the page when you scroll down, choose the free

download and click on it. You can choose between some ways to log in through a Facebook or Google account. But don't worry if you don't have one of these and look for the Alternative Download button.

Before finishing the download process Think about which directory you want to install it. Just click the Yes button (if something appears). When the main wizard appears, you will see the Sharing information that shows and gives you its terms and policies on the policy, so you can read it if you want but if you want to save some time, check the box that says you accept the agreement and Advance. Click Next and actually browse to the location on your drive where to install it.

Don't forget to make your shortcut on your desktop. When you click Next, the process bar will indicate the installation process. You can click Finish. Again, the Policy Information will be displayed for you to read again or simply accept the button.

You will now see the Share on your board illustration. Therefore, you must scan your mobile device using the QR code function to send and transfer your files or receive files as well.
