

## Review Telegram

### Telegram

Telegram is an alternative instant messaging application. Telegram client applications are available for all platforms and devices. Users can send messages and exchange photos, videos, stickers, audio and files of any kind

Communication is one of the most prominent axes of our days, that's why all the apps dedicated to **messaging services**, file sharing and calls are very important. In 2013, the Russian brothers Pavel and Nikolai Durov launched one of the apps that would be, until today, one of the most interesting proposals of its kind due to the novel features it has.

**Telegram** is one of the options that can be **downloaded for free** to keep us connected with friends, family or colleagues. The platform has a series of advantages that make it different from other tools of its type such as WhatsApp, Facebook or Zoom.

The app that in 2020 exceeded 400 million users is a simple proposal, with a friendly interface that does not present complications in understanding its operation. The security of the messages is one of the favorite elements of the users since they are very well protected with an advanced encryption system and there is the option of destroying them after a certain amount of time.

The messaging service offers the possibility of using it on different devices in a synchronized way. This option includes a comfortable web platform that works on computers, it includes PC, MAC and Linux. The speed of operation and delivery of material in Telegram is very fast and does not have any size limits, neither in the chats nor in the files that are sent or received.

One of the most relevant characteristics and what makes it very different from its competitors is that Telegram is open source. In other words, it is a collaborative type project. Everyone can access the source code and this allows people to create functions and tools that enhance the experience. In addition, this also contributes to the security of the platform.

Chat groups are one of the stars of the moment and Telegram offers a unique possibility. The app supports up to 200,000 users in the same conversation. In addition, for those who have many chats from different groups and for various reasons, it has an advanced and accessible folder system. With this option it is possible to group conversations, mark them to read them later, fix them or delete them. Telegram collaborates to keep all communications orderly.

**Telegram** is very popular also for the extensive catalog of stickers that it offers its users. The nice and colorful images allow you to decorate the talks in the most fun way. In one of its latest updates, the Durov brothers' app modified the menu to access these files. Now more than 20 thousand animated icons are accessible through a comfortable and intuitive menu. GIFs are also part of the talks within the app, to access them you can also do it through a special menu and you can search for them by different categories. The small videos are divided by the most prominent, recently used ones or they can be located through emojis or words.

Since 2015 Telegram has had a powerful photo and video editor. We know how important it is to have the best images today and that is why we believe that the tool of this platform is one of the best. Among its novelties you have the possibility to add animated stickers to the videos and convert them into GIFs. You can also improve the quality of audiovisual productions, brightness, contrast, saturation and a host of other properties. You can even zoom in on the file to make it look its best before sharing.

**Downloading Telegram** is a great option and advantage for mobile phones. The Durovs' proposal differs from large competitors with an open and collaborative idea. This feature makes it improve in terms of security, protection of messages, user information and the large amount of new content, tools and programs that are constantly added. The possibility of hosting so many people in a broadcast channel makes it one of the chosen means to provide information in a fast, simple and reliable way.

Telegram may become the number one messaging service in the future, leaving behind the biggest competitors.

Pros	Cons
<ul style="list-style-type: none"><li>-Fast</li><li>- Easy to create groups / channels to communicate with others.</li><li>- Chat groups can have a large number of members.</li><li>- Great selection of GIFs.</li></ul>	<ul style="list-style-type: none"><li>- Not used by many people</li><li>- Does not have video calls</li><li>- Voice calls can be choppy</li><li>- Some aspects of the configuration can be improved.</li></ul>
