Review ZEDGE
ZEDGE

Create ringtones, wallpapers, notifications and more with Zedge! Discover how to download music for your mobile ringtones and also choose from thousands of available images. With the Zedge app you can also upload your own files and try to bring something new to the Zedge community. The application can be used on both mobile devices and computers

Zedge is one of the most famous wallpapers and ringtones applications for Android and Ios. You can download the music you want for your mobile tones and choose an exclusive wallpaper to personalize your smartphone or tablet.

It is a small and free application that will quickly find interesting ringtones, notification signs, games and wallpapers for our Android device. The application is not a directory of free resources of this type, in which we can search for interesting files, divided into more than 20 different categories.

The manufacturer of the program has ensured that the content in its repository is easily searchable. There is a category view and a simple search engine, which based on the tags will find what we are looking for. The content is serialized due to its popularity and the date of addition to **Zedge**.

The service provider also offers its own recommended material flow. When you select any item (wallpaper, icons), we can disable **Zedge**, as the appearance of our smartphone will change. If what we see attracts us, we can select the download material; you just need to give the app permission to access the media on your device. It is not enough: the program was designed so that you can make a wallpaper change (either on the lock screen or in the main menu) directly in the preview. The great advantage of **Zedge** is that we do not have to leave the program to make all the possible modifications.

If you use **Zedge** a lot, you will surely be useful to list the content you like. These will be useful, for example, if you want to standardize the appearance of the interface on the different devices it is on. Then you just need to install **Zedge** on another device, log in to your account, and download all the materials from the list created above. In addition, it simplifies the personalization of our smartphone, since, for example, we erase data from it.

Given the vast database of content available at **Zedge**, the simplicity of the app's interface, and the incredible convenience of using it, you should consider that it is not only a decent command, but a "must have" for every user of the device.

Zedge mainly offers free stuff, except for the **premium** stuff that people can buy. You can request it on the marketplace of the official zedge site. This market is designed for people who want to sell their artistic creations at their own price in the world's number one phone personalization app. You can go ahead and tap the "Join Now" button to take this action to the next step: the application form.

The application is very simple and requires fairly standard information: email address, their names and a link to their work. Zedge will review your request within 7 days and if you receive the invitation, you can make a non-exclusive account and accept its service principles. Therefore, you can submit a link to your work from any other platform or website and wait to see what will happen.

If you do not know how to use the application, we can explain it to you here. When you go to your account, you can

see how easy it is to use it, it has a standard main page that looks a bit like the instagram profile, but there on the left side of your screen is the purple circle with an arrow: this is the load button and if you click on it, the screen will load the screen with active drag and drop directory and you can start loading things.

There are 2 signs represented, one for a small speaker and one for the camera, which is a clear sign of what type of media is typically supported on that website. If you want to load music content, it will open for a simple player with a pause button and some fields with additional information. Go ahead and give this file first, add some tags and choose a category. The only restriction is that the maximum size is 30 seconds, this can be useful for notifications, ringtones or anything you can create.

For each visual file you want to upload, you can basically preview how it will stay on mobile phone and tablet as well. This time, after naming your photo, you will see some suggested tags for your content and this is based on the artificial intelligence methods **Zedge** uses. You go through your gallery, choose some images and try to edit or share the content.

Pros	Cons
-Clear interface improves uptime. -The products are grouped by category. -We can save your favorite wallpapers, ringtones, etc. -You can upload files.	-To have access to the ringtones, you must buy Zedge Premium. -You have to wait for comments if you upload files and want to earn money. -The 30 second audio file is not that good. -They have some troublesome "harmful" problems in the past.
