Review Foil Turning 3D
Gismart
Foil Turning 3d is a free app developed by Gismart available for Android and iOS. It is a game that will enhance your creative conditions as it gives you many possibilities to make objects with aluminum foil in a fun, authentic and original way. Also have fun with entertaining mini-games

How much creativity can a game or application exploit? The advantage of the development of mobile technology apps is that they have given users and people many possibilities to discover new worlds, help them in their daily tasks, present new entertainment and have more possibilities to create in different media and creative ways. Basically, apps have promoted all kinds of creative, authentic, unrepeatable and original proposals. Very simple and austere proposals can be popular, entertaining and original for a large number of people.

Today we are going to talk about a **free game** that meets these types of characteristics. It is a program created by Gismart studios that can be **downloaded for free on Android and iOS**. We refer to Foil Turning 3D.
Foil Turning 3D is not the first event of its kind launched by Gismart. The firm has developed successes in different fields, not only in the games aspect but also in music or wellness programs. Among the outstanding deliveries that the company launched are VIP Guard, Cool Goal, Baby and Mom Idle 3D, Perfect Expert 3D, Domino Smash, Cleon, Ice Creamz Roll, Beat Maker Go and Piano Crush. Without a doubt, a wide catalog with a lot of variety and quality in its launches.

If you find yourself wondering if it is a good decision to **download Foil Turning 3D** or not, we are going to tell you all the reasons why you should do it. The Gismart app is one of the most original on the market today and you will know why. The objective of the game is to mold a piece of aluminum foil and then apply it in a minigame. This that seems so simple at first glance takes its steps and brings its complexity, but at the same time it is very fun since you can create the product as you like, color it, shape it and apply your personal touch.
Once you start the game the first thing you will have to do is collect paper from the aluminum foil roll. The game will suggest the way you should follow and you will manage how much you want to get out of the material. Depending on what you take, the object you create will be denser or lighter. This you must take into account when you participate in the minigame.

Once you have your piece of paper already formed, you should give it consistency by applying blows with your hammer. We can provide the tool with different aspects such as smiling faces, turkey legs or medieval weapons. Our next step will be to sand and file the material so that it is robust and consistent. After that we will apply all our creativity as we will work on the aesthetic aspect of our creation. We will color it first and then apply styles, decorations or shapes to it. Finally, we will participate in a minigame in which we will have to use the object that we have created.
One of the **advantages of Foil Turning 3D** is that it is a game that will develop and enhance your creativity. You have all the freedom to choose how much material to use, how solid to make it, how much to polish it, how to paint it and what personal touch to give it. Then, at the time of the little game is when you can enjoy your creation.
The advice that we can give you for when you start using the Gismart app is that you always think that later you will have to use the object in a minigame. This is very important since it will be the instance in which you are awarded the points that you can later exchange for more objects and tools.
Gismart surprises with a creative, fun and, above all, original delivery. Foil Turning 3D stands out from other apps for its original and fun idea. It manages to combine elements of creation in the first part of the program, with fun

moments of entertainment when you participate in the minigame towards the end. The shapes that the creations can take are very original and range from a bowling ball, to a knife or an Oscar statuette.

Remember that **Foil Turnind 3D can be installed for free** and features banner ads. On the contrary, if you want to pay for the Gismart game, you will be able to remove the advertisements and have a more complete experience of one of the newest apps in recent years.

Pros	Cons
- Many possibilities to create	- Target unclear
- Original delivery	- Too many banner ads
- Free download	- Regular graphics
- Enjoy minigames	- No benefits beyond paying
